

## 5.2 Exercise Charts

### Tableau Charts

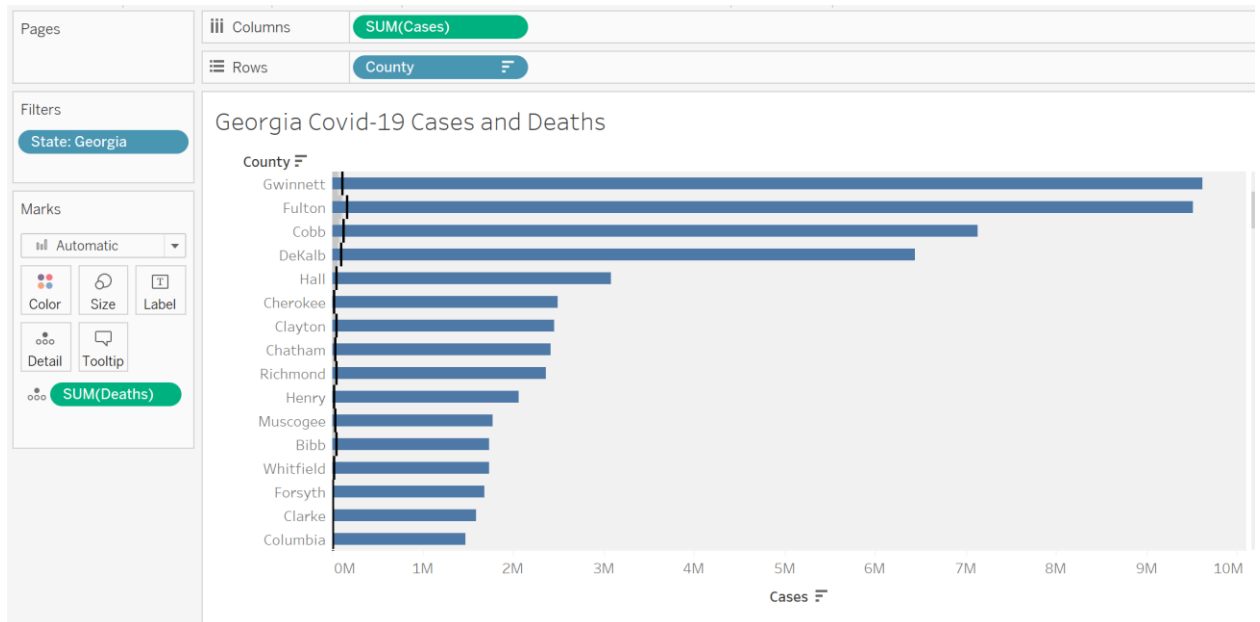

- Tableau – Histogram

- Tableau – Box Plot

- Tableau – Bullet Chart

- Tableau – Stacked Horizontal Bar Plot

## Python Charts

- Python – Histogram

```
# Create a histogram using hist for my reading, math, writing columns
education.hist(column=['reading', 'math', 'writing'], grid=True,
               figsize=(15, 7), legend=True, bins=10, color=['#A0E8AF']);
```

- Python - Box Plot

```
# I'll use seaborn to create a boxplot that shows the
# dropout_rate by the pupil_staff_ratio
sns.set_style("whitegrid")
sns.boxplot(x = 'pupil_staff_ratio', y = 'dropout_rate', data = education)
```

<AxesSubplot:xlabel='pupil\_staff\_ratio', ylabel='dropout\_rate'>

- Python – Bullet Chart

```
# I'll use graph_objects to create a Bullet Chart that shows the murders for Florida
# against the largest numbers in the US
```

```
import plotly.graph_objects as go

fig = go.Figure(go.Indicator(
    mode = "number+gauge+delta",
    gauge = {'shape': "bullet"},
    value = 5,
    delta = {'reference': 35.4},
    domain = {'x': [0, 1], 'y': [0, 1]},
    title = {'text': "Murder"}))
fig.update_layout(height = 260)
fig.show()
```

5  
▼ -30.4

- Python – Stacked Horizontal Bar Plot

```
# Create a Stacked Horizontal Bar Plot for florida for reading, math, and writing
education_update.plot.barh(stacked=True);
```

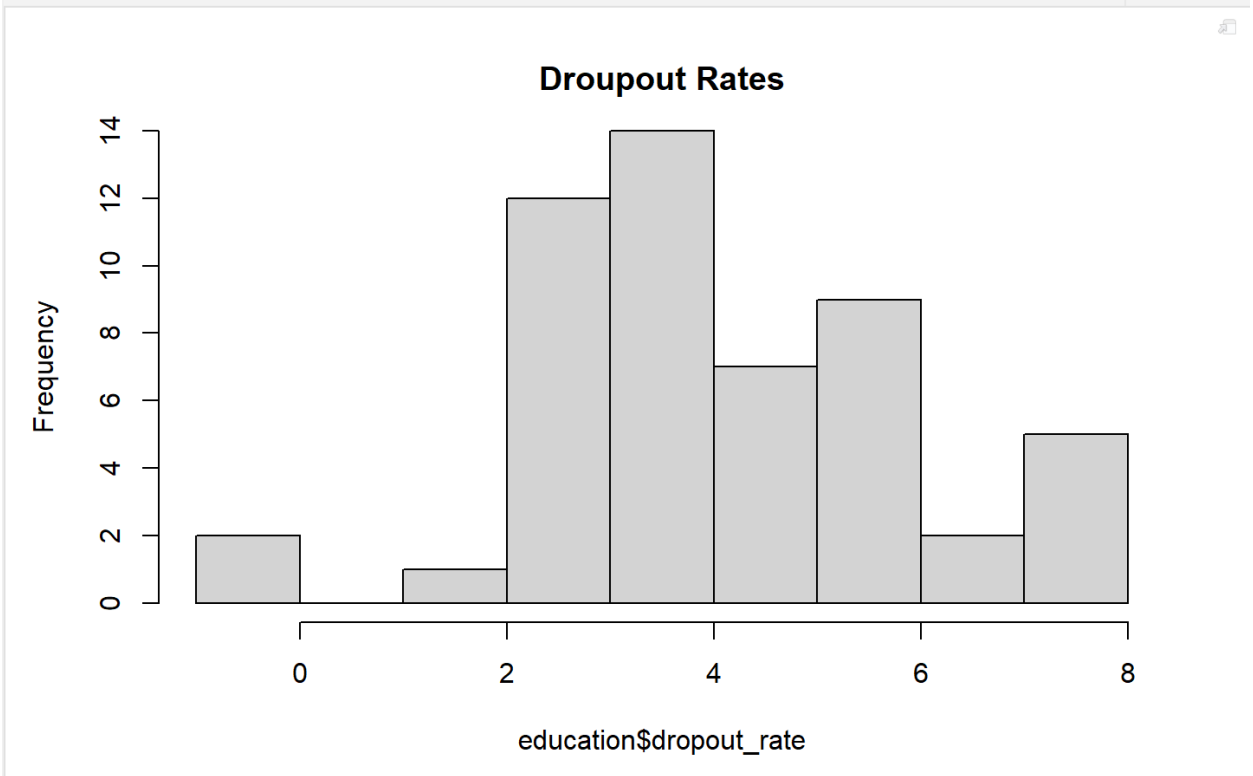

## R Studios Charts

- R Studios – Histogram

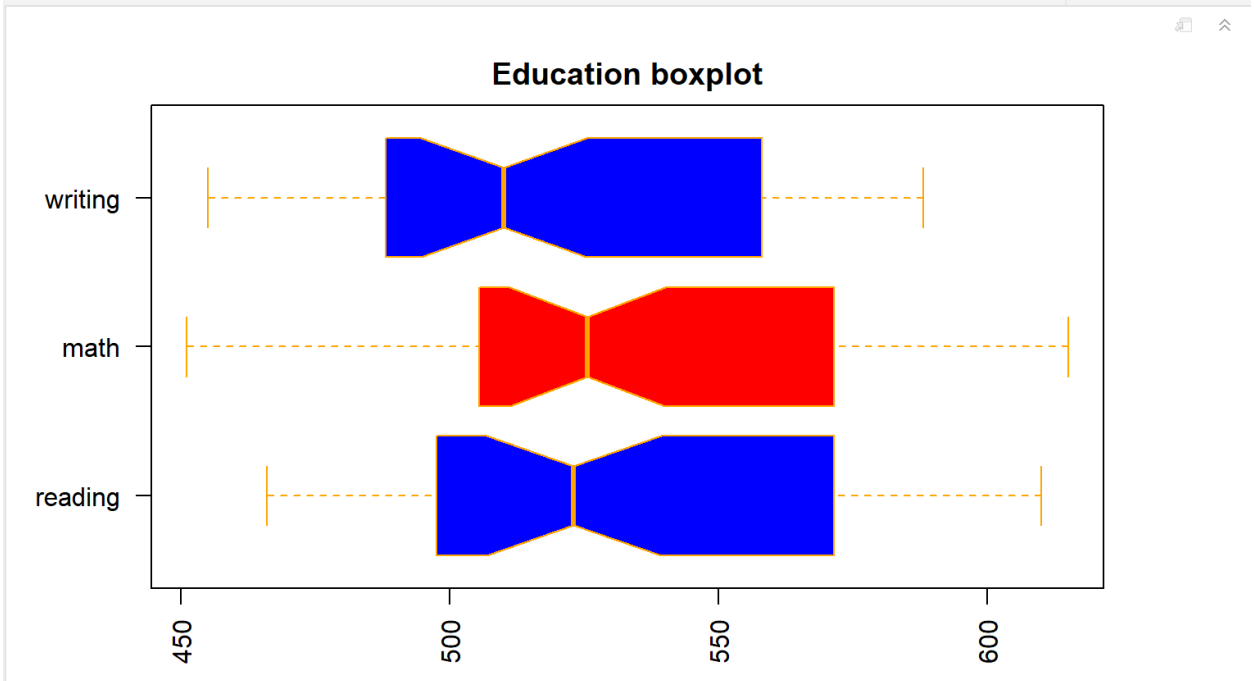

```
{r histogram, include=TRUE}
# I will now use hist to create my histogram that shows the dropout_rate with ten breaks

hist(education$dropout_rate, breaks=10, main="Droupout Rates")
```

- R Studios - Box Plot

```
##{r box plot, include=TRUE}  
# I will now use boxplot to create a box plot that shows the box plots for reading, math, and  
writing  
boxplot(education$reading, education$math, education$writing,  
main = "Education boxplot",  
at = c(1,2,3),  
names = c("reading", "math", "writing"),  
las = 2,  
col = c("blue","red"),  
border = "orange",  
horizontal = TRUE,  
notch = TRUE  
)  
...
```
